

Independent Technical Reviews

Our staff is highly experienced in performing technical reviews and evaluations of organizational assets seeking to improve or being considered for investment, purchase, or sale. We have reviewed and examined:

- Process design,
- Equipment (both fixed and portable),
- Operating facilities and their histories,
- Projected performance,
- Operations and maintenance,
- Fleet sizing,
- Utilization rates, and
- Supporting contracts for the process.

Additionally, we have performed infrastructure condition assessments and evaluation of property management operations consisting of in depth reviews of cost factors including operating practices, supply, equipment, utility costs, labor costs, and service contract costs. We review each factor against reliability criteria and benchmark the facility against similar facilities to obtain a performance comparison.
